6. All references in the DPA to “Student Data” shall be amended to include and state, “Student Data and APPR Data.”
7. To amend Article II, Section 5 to add: Provider shall ensure that its subprocessors agree that they do not have any property, licensing or ownership rights or claims to Student Data or APPR data and that they will comply with the LEA’s Data Privacy and Security Policy. Provider shall examine the data privacy and security measures of its Subprocessors. If at any point a Subprocessor fails to materially comply with the requirements of this DPA, Provider shall: (i) notify LEA, (ii) as applicable, remove such Subprocessor’s Access to Student Data and APPR Data; and (iii) as applicable, retrieve all Student Data and APPR Data received or stored by such Subprocessor and/or ensure that Student Data and APPR Data has been securely deleted or securely destroyed in accordance with this DPA. The confidentiality and data security obligations of Provider under this DPA shall survive any termination of this contract to which this DPA is attached but shall terminate upon Provider’s certifying that it and it’s subprocessors, as applicable: (a) no longer have the ability to Access any Student Data provided to Provider pursuant to the Service Agreement and/or (b) have destroyed all Student Data and APPR Data provided to Provider pursuant to this DPA. The Provider agrees that the timelines for disposition of data will be modified by any Assurance of Discontinuation, which will control in the case of a conflict. Hosting and Access Control

Hosting

Our application is hosted through Amazon Web Services (AWS).

Hardware security

Only Amazon administrators have physical access to our hardware, and Amazon has their own procedures to ensure the security of that hardware.

Access Control

NoRedInk maintains an Information Security Management System (ISMS). We do so currently via 3rd party. Our product service resides on AWS. As an ISMS, AWS is certified as compliant with ISO 27000. (https://d1.awsstatic.com/certifications/iso_27001_global_certification.pdf)

Access to our production infrastructure such as applications servers is permission controlled through AWS Identity and Access Manager (IAM) (<https://aws.amazon.com/iam>) policies. We require engineers to upload ssh access tokens and are able to revoke access centrally for individuals. Password only authentication to these hosts is disabled and access is only possible through use of the access tokens.

Database access is limited to users with these tokens by ssh tunnelling through an infrastructure host. There is read access to data in the database for reporting using metabase.io, this access is limited by NoRedInk google credentials.

Logs

We use AWS CloudTrail, which gives logs about user access and infrastructure changes. We use GoogleApps, which gives us logs about user access. We have logs from our application servers, database servers, and load balancers. Logs are retained for 90+ days. Only 3rd Party (AWS / Google) and key internal administrative staff have access to these logs.

Data Policies

Compliance

We comply with the following laws concerning the protection of student personally identifiable information, including educational records: the Family Educational Rights and Privacy Act (“FERPA”), Children’s Online Privacy Protection Act (“COPPA”), and New York State Education Law Section 2-D.

Child Friendly Policies, Terms and Conditions

Our policies and terms are written in a non-legaleze friendly format. In addition, based upon our COPPA alignment, underage and/or minor students must have parental consent to utilize our services.

Our privacy policy (<https://www.noredink.com/privacy>) makes it clear the age restrictions for the use of the NoRedInk service, including parental consent for underage children.

Use of Data

Our privacy policy (<https://www.noredink.com/privacy>) makes it clear that we will not rent or sell PII. We do share de-identified data with 3rd party services for analysis in support of product maintenance and improvement.

We don’t serve advertising within the product but we do use the following services for analysis in support of product maintenance and improvement: Google Analytics, MixPanel, Customer.io, Inspectlet, Rollbar, and Bugsnag.

User Access to Data

We do not provide unnecessary visibility of other users, and there is no public-facing or in-solution browsable user profile for students or teachers.

Students can only access information relating to their own account, their own scores on practice assignments, quizzes, or their own writing sections.

Teachers can access information relating to their own account as well as see the scores and submissions for their student’s work on the site.

Facilitator access upon request gives school based admin access to all teacher and student accounts in the building.

Data Ownership

Our terms of service (<https://www.noredink.com/terms>) describe our policy of ownership of user submissions. All user submissions belong to the user, however the user grants NoRedInk a license to translate, modify (for technical purposes, for example making sure the content is

viewable on an iPhone as well as a computer) and reproduce such user submissions, in each case to enable us to operate the Services. This is a license only – ownership in user submissions is not affected.

We are in compliance with CCPA, which requires we have a means to provide and remove a user's data from our system. At any time, the client may request a copy of their data, or a request for deletion, directly from NoRedInk by submitting a written request via Privacy Request Form (<https://preferences.noredink.com/privacy>).

Data Storage and Security

Data Location

All customer data is stored in the United States.

Data Backup and Recovery

We use AWS processes for data backup and recovery. For Amazon RDS, we maintain storage across multiple availability zones. We have database replicas which can quickly replace our master RDS database in the case of a failure. In addition, we maintain a 30-day backup on Amazon RDS.

Data Encryption

All client to server data is transmitted with TLS 1.2 over HTTPS. At rest, we utilize Amazon RDS's at-rest encryption solution, Transparent Data Encryption. Passwords are further encrypted at rest using the bcrypt function.

In addition, it is our policy to avoid storing any personal data on employee devices.

Web Environment Security

We store cookies on user's computers, we do not store credentials that could be used for re-authentication. Cookies are encrypted and signed, and are sent with the flags 'secure' and 'http-only' to prevent the most common attacks. We have tools in place to monitor abnormal system behavior (NewRelic, Rollbar, etc.) but do not use a traditional Intrusion Prevention System to identify problematic network activity.

We also use backend frameworks with built in input validation, including SQL sanitization to prevent SQL injection, and string sanitization to prevent XSS. All of our forms automatically include an authenticity token to prevent CSRF.

System Security

Security Updates

The engineering team maintains a listing of the “sunset dates” of security support of all external software dependencies, and prioritizes updating those dependencies in advance of any sunsetting of security support.

In addition, the engineering department maintains a weekly “security rotation,” supported by automated detection of dependency security updates (via Dependabot). This results in security updates typically being incorporated into the system within 1 week.

User Account Security

All users of the application require a password-protected login in order to authenticate. Teachers and students can register with a unique username and a password, or use Google SSO or Clever SSO.

Because we do not require students to provide an email, we cannot use the traditional password-reset-via-email mechanism in the case of a student forgetting their password. For this use case, teachers have the ability to reset the passwords of their students.

User credentials are encrypted, as all data, using our standard encryption in transit and at rest requirements. In addition, passwords are further encrypted at rest using the bcrypt function. We do not store or transmit a user password without encryption.

Third Party Services and Subcontractors

We only partner with third party services and subcontractors whose privacy policies are consistent with the obligations within our privacy principles (<https://www.noredink.com/privacy>). We will not utilize subcontractors without a written contract that requires the subcontractors to adhere to, at a minimum, materially similar data protection obligations imposed on the contractor by specific customer, state and federal laws and regulations.

Incident Management and Response

We have 24/7 on call support for incident response. Two-to-three engineers are on call each week. We use several application monitoring services (NewRelic, Datadog, Rollbar, Bugsnag), configured to alert our on-call engineers via Slack in the case of a possible incident. All alerts must be investigated, and all fires must be addressed immediately.

We maintain, and continue to expand, a library of on call response playbooks which detail both how to respond and relevant surrounding context, for a variety of possible incident scenarios. We aim to link each of our alerts to the relevant playbook to facilitate a rapid incident response.

In addition, all fires require detailed write-ups of the events of the incident and investigation, any

root cause analysis, and next steps. These write-ups are reviewed by key stakeholders, and next steps are recorded and prioritized by the appropriate teams.

In the case of a data breach, our current practice is to notify a client within 48 hours of the recognition of a data breach.

Data Transition and Secure Destruction

Upon expiration or termination of the Contract or Agreement, NoRedInk shall:

- Securely transfer data to EA, or a successor contractor at the EA's option and written discretion, in a format agreed to by the parties.
- Securely delete and destroy data and remove it from any archival databases within 30 days of expiration.

Training

NoRedInk provides periodic security and privacy training to those of its employees and individual consultants who operate or have access to the system. NoRedInk contracts with Vanta for employee training that covers the following topics: general cybersecurity, reporting suspicious activity, passwords, password managers, MFA, malware, ransomware, phishing, mobile security, cloud security threats, policy violations, data classification and data privacy.
