DATA PRIVACY
AGREEMENT (DPA)
FOR TEXAS K-12
INSTITUTIONS

Frisco Independent School District

and

Clever Inc.

October 8, 2020

Background and Instructions

History of Agreement- This agreement has been drafted by the Texas Student Privacy Alliance (TXSPA). The Alliance is a collaborative group of Texas school districts that share common concerns around student and data privacy. The Texas K-12 CTO Council is the organization that sponsors the TXSPA and the TXSPA is the Texas affiliate of the national Student Data Privacy Consortium (SDPC). The SDPC works with other state alliances by helping establish common data privacy agreements unique to the jurisdiction of each state. This Texas agreement was drafted specifically for K-12 education institutions and included broad stakeholder input from Texas school districts, statewide associations such as TASB, TASA, and TASBO, and the Texas Education Agency. The purpose of this agreement is to set standards of both practice and expectations around data privacy such that all parties involved have a common understanding of expectations. This agreement also provides a mechanism (Exhibit E- General Offer of Terms) that would allow an Operator to extend the ability of other Texas school districts to be covered under the terms of the agreement should an Operator sign Exhibit E. This mechanism is intended to create efficiencies for both Operators and LEAs and generally enhance privacy practices and expectations for K-12 institutions and for companies providing services to K-12 institutions.

Once the Operator accepts the terms of the agreement, the Operator should wet sign the agreement and return it to the LEA. Measures:

Operator stores its data in the United States and takes strong measures to keep data safe and secure. Operator maintains strict administrative, technical and physical procedures to protect information stored in its servers. Access to information is limited (through user/password credentials and two factor authentication) to those employees who require it to perform their job functions. Operator uses industry-standard Secure Socket Layer (SSL) encryption technology to safeguard the account registration process and sign-up information. Other security safeguards include, but are not limited to, data encryption, firewalls, and physical access controls to buildings and files. Operator uses bank-grade security infrastructure at the software and network level, to ensure that student records are always encrypted and transmitted securely. This includes use of TLS / SSL protocols, API call level authentication, and API bearer tokens with 200 bits of entropy. Operator’s Transport Layer Security requires that all data transferred via its website and API use the Transport Layer Security (TLS) cryptographic protocol over a HTTPS connection. This means that unique session keys are used to encrypt and decrypt data transmissions and to validate transmission integrity. Operator’s servers prefer perfect forward secrecy (using ECDHE) to encrypt data using 256 bit Advanced Encryption Standard (AES) – which surpasses the standard adopted by the consumer banking industry and the U.S. Government for the secure transmission of classified data.
