For purposes of this DPA, Personally Identifiable Information shall include the categories of information listed in the definition of Student Data.

Provider: For purposes of the Service Agreement, the term “Provider” means provider of digital educational software or services, including cloud-based services, for the digital storage, management, and retrieval of pupil records. EXHIBIT C.1 – NIST CSF TABLE

The table below will aid the review of a Contractor's Data Privacy and Security Plan. Contractors should complete the Contractor Response sections in the table below to describe how their policies and practices align with each category in the Data Privacy and Security Plan template. To complete these 23 sections, a Contractor may: (i) Demonstrate alignment using the National Cybersecurity Review (NCSR) Maturity Scale of 1-7 ; (ii) Use a narrative to explain alignment (may reference its applicable policies); and/or (iii) Explain why a certain category may not apply to the transaction contemplated. Further informational references for each category can be found on the NIST website at <https://www.nist.gov/cyberframework/new-framework>. Please use additional pages if needed.

Function	Category	Contractor Response
IDENTIFY (ID)	Asset Management (ID.AM): The data, personnel, devices, systems, and facilities that enable the organization to achieve business purposes are identified and managed consistent with their relative importance to organizational objectives and the organization's risk strategy.	External devices are cataloged, each are risk-assessed. Internal devices pose little to no risk as they do not interact with critical products.
	Business Environment (ID.BE): The organization's mission, objectives, stakeholders, and activities are understood and prioritized; this information is used to inform cybersecurity roles, responsibilities, and risk management decisions.	Stakeholders are notified in categorizing risk, and each knows their place in the supply chain, and external services are identified and monitored.
	Governance (ID.GV): The policies, procedures, and processes to manage and monitor the organization's regulatory, legal, risk, environmental, and operational requirements are understood and inform the management of cybersecurity risk.	Cybersecurity policies are communicated to stakeholders, responsibilities are correctly placed, and all relevant regulator and data privacy requirements are met.
	Risk Assessment (ID.RA): The organization understands the cybersecurity risk to organizational operations (including mission, functions, image, or reputation), organizational assets, and individuals.	Vulnerabilities are identified, documented, and go through a risk assessment to prioritize a response.
	Risk Management Strategy (ID.RM): The organization's priorities, constraints, risk tolerances, and assumptions are established and used to support operational risk decisions.	Risk tolerance is clearly communicated and identified.
	Supply Chain Risk Management (ID.SC): The organization's priorities, constraints, risk tolerances, and assumptions are established and used to support risk decisions associated with managing supply chain risk. The organization has established and implemented the processes to identify, assess and manage supply chain risks.	Supply chain and dependencies are routinely checked and monitored for vulnerabilities, and are kept to a minimum.

Function	Category	Contractor Response
PROTECT (PR)	Identity Management, Authentication and Access Control (PR.AC): Access to physical and logical assets and associated facilities is limited to authorized users, processes, and devices, and is managed consistent with the assessed risk of unauthorized access to authorized activities and transactions.	Access to critical assets are tightly controlled via OAuth, IAM, and two factor authentication.
	Awareness and Training (PR.AT): The organization's personnel and partners are provided cybersecurity awareness education and are trained to perform their cybersecurity-related duties and responsibilities consistent with related policies, procedures, and agreements.	Relevant parties are informed of their duties, understand their risk, and minimization techniques.
	Data Security (PR.DS): Information and records (data) are managed consistent with the organization's risk strategy to protect the confidentiality, integrity, and availability of information.	Data is encrypted at rest, in transit, environments of production and testing are separated. Processes for high availability, and capacity are maintained.
	Information Protection Processes and Procedures (PR.IP): Security policies (that address purpose, scope, roles, responsibilities, management commitment, and coordination among organizational entities), processes, and procedures are maintained and used to manage protection of information systems and assets.	Infrastructure configuration change control is in place, backups conducted, data destroyed, and protection process are constantly being reassessed for places for improvement.
	Maintenance (PR.MA): Maintenance and repairs of industrial control and information system components are performed consistent with policies and procedures.	Maintenance is regularly performed to guard against vulnerabilities, and adequate protections are in place so that only authorized users can perform maintenance.
	Protective Technology (PR.PT): Technical security solutions are managed to ensure the security and resilience of systems and assets, consistent with related policies, procedures, and agreements.	Audit logs are maintained by relevant cloud providers, network communication is protected, resilience policies in place, and systems are configured for high availability.
DETECT (DE)	Anomalies and Events (DE.AE): Anomalous activity is detected and the potential impact of events is understood.	Logging, monitoring, and alerting is in place to watch for anomalies.
	Security Continuous Monitoring (DE.CM): The information system and assets are monitored to identify cybersecurity events and verify the effectiveness of protective measures.	Automated tools monitor potential code vulnerabilities, and external service providers are regularly monitored for updates of vulnerabilities.
	Detection Processes (DE.DP): Detection processes and procedures are maintained and tested to ensure awareness of anomalous events.	Detection is in place, maintained, and is always being improved for finer-grain control of alerting of anomalous events.

Function	Category	Contractor Response
RESPOND (RS)	Response Planning (RS.RP): Response processes and procedures are executed and maintained, to ensure response to detected cybersecurity incidents.	Response plans are executed immediately after threats are identified.
	Communications (RS.CO): Response activities are coordinated with internal and external stakeholders (e.g. external support from law enforcement agencies).	Relevant stakeholders know their place in the chain, and information is shared when the response is complete and/or the most convenient time possible.
	Analysis (RS.AN): Analysis is conducted to ensure effective response and support recovery activities.	Thorough analysis and forensics are performed in order to guarantee a successful recovery.
	Mitigation (RS.MI): Activities are performed to prevent expansion of an event, mitigate its effects, and resolve the incident.	Incident mitigation strategies are executed and are incidents contained.
	Improvements (RS.IM): Organizational response activities are improved by incorporating lessons learned from current and previous detection/response activities.	Knowledge base is updated after incidents, and post-mortems are performed.
RECOVER (RC)	Recovery Planning (RC.RP): Recovery processes and procedures are executed and maintained to ensure restoration of systems or assets affected by cybersecurity incidents.	Recovery plans are in place to maintain a safe recovery.
	Improvements (RC.IM): Recovery planning and processes are improved by incorporating lessons learned into future activities.	Recovery planning is always improving and learning from new events.
	Communications (RC.CO): Restoration activities are coordinated with internal and external parties (e.g. coordinating centers, Internet Service Providers, owners of attacking systems, victims, other CSIRTs, and vendors).	Restoration efforts are coordinated with relevant parties.
